## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-16 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The new subject matter is the newly introduced limitation claiming "wherein each of the linguistics pattern represents a grouping of components relative to the phrase".

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Berger et al. (5,510,981)

As to claims 1-3, Berger teaches a computer implemented method for natural language translation of a source/first language into a target/second language, comprising the steps of:

Receiving a source text and generating at least two target hypothesis (translations);

Calculating a "target hypothesis match score" (translation probability) that is a combination of two different models which are a language model match score and a translation match score; and

Identifying and outputting the translation with the highest translation probability (abstract; Fig.1)

As to claim 4, Berger teaches where the source language is translated using a bilingual dictionary (Fig.1, 14).

As to claim 5, Berger teaches where the translation match score includes probability of the occurrence of the source given the target word in one of the target hypothesis (abstract). Claims 6-16 are analogous to claims 1-5 and are rejected for the foregoing reasons by Berger.

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).
